Appendix G - Drive-Thru PODs
Drive-thru Point of Dispensing sites (PODs)

Drive-thru PODs are useful for limiting interactions with the public for infection control, large throughput, and serving populations that may not be able to stand for long periods of time. Drive-thru PODs differ from indoor in-person PODs as additional staff and equipment are needed. Site evaluations considering layout and flow of traffic are needed before a location for the clinic is determined. Additional signs, tents, and traffic cone lanes must be set up to guide cars through the clinic. Greeters distribute forms to those waiting in line and traffic control guides people through form, vaccination, and waiting areas. These may not be good during extreme weather events for the safety of the workers of the Drive-thru PODs since most locations are outside. If an indoor facility can handle the exhaust of the vehicles, these would be a good alternative and allow for year round possibilities for drive-thru PODs.

Staffing:

- Greeter/ triage/ Forms distribution – Ask everyone as they come in to get insurance cards out and hand them forms to fill out as they go to Forms.

- Forms / Payment collection – Clerical and Billing or non-medical. They will go over the forms to make sure everything is filled out, scan insurance cards or collect payment.

- Vaccinators - The number of vaccinators will depend on the number of vaccines available at each site. If they are not BRDHD staff, we will need provider numbers for billing purposes.

- Traffic Control – Help direct traffic and alert EMS if something goes wrong. There should be one at the entrance, one at the greeter’s tent to direct into lanes, one after the vaccinators tent to direct into one lane again and one at the exit.

- EMS or medical responders- Monitor people during their 15 minute wait and to respond to any medical emergency.

- Runners – to replenish any supplies and collect forms or messages.

- Command – IC, Logistics, Operations, Finance, and Planning
